Virtual workplace in the Swiss Cloud

Virtual office: Swiss cloud IT total solution from a single source

A virtual workstation is an invisible (virtual) desktop computer that is available to you around the clock at any location.

All you need is access to the internet and a terminal device, such as a laptop, tablet or smartphone.

Your virtual workstation is operated on a high-tech server infrastructure in Swiss data centers. All the software you want is installed on it and can be accessed at any time. We concentrate on your IT - and you on your day-to-day business, without worrying about IT.

This is how your virtual workstations work.

From any end device, such as laptop, PC, tablet or simply a smartphone: access your virtual desktop computer.

You log in from your end device via the Internet using an encrypted connection and have your usual programs, data and desktop icons available. You decide which end devices your employees use, so that you can do your work productively and from any location.

We take care of the rest.

Our solution

- Operation of your workstations in modern Swiss data centers
- High security due to location in the data center (redundancy, protection against fire, water, etc.) and security management incl. data backup
- Highest security thanks to encryption and 2-factor authentication
- Virtual workstations accessible at any time and from anywhere
- Integration or connection of your existing IT
- Maintenance, care and monitoring of your virtual workstations
- Support from your personal contact person
- All-inclusive flat rate with fixed monthly price

Flexible, predictable
monthly costs

Increasing security

Reducing support
costs

Virtual office: Our added value for your SME

- You avoid high IT investments in hardware and software
- Turnkey IT solution at a fixed monthly price
- Your IT is ready for immediate use
- Access is possible from anywhere: PC, notebook, Mac, tablet, smartphone
- New employees activated in just a few minutes
- Security and legally compliant backup for your data and documents
- Secure hosting in professional Swiss data centers
- You only pay for the services you actually use
- Mapping of any individual IT environment possible

Potential Savings

- Reduction of support costs for your local infrastructure
- Reduction of license costs. No more need for additional local software (e.g. Microsoft Office)
- Savings on server hardware, operation, maintenance, licenses, backup, power, cooling, etc.
- Fast, fail-safe connection to our data centers
